

Coordination of Benefits (COB) & Medical Claims Training Research

This document summarizes publicly available training resources, Udemy courses, and related technical concepts associated with Coordination of Benefits (COB), medical claims processing, and healthcare revenue cycle management.

Most Relevant Udemy Courses

1. Master in Healthcare Revenue Cycle Management (RCM)

Covers medical billing, insurance processing, Medicare workflows, claims operations, reimbursement systems, and payment posting.

Link: <https://www.udemy.com/topic/medical-billing/>

2. Revenue Cycle Management and Medical Billing for Beginners

Covers eligibility verification, claims processing, primary vs secondary insurance concepts, denials management, reimbursement workflows, and payer coordination concepts.

Link: <https://www.udemy.com/course/revenue-cycle-management-medical-billing-course/>

3. Certified Professional Biller (CPB) Certification Course

Focused on operational medical billing workflows including claim adjudication, payer sequencing, reimbursement logic, denials, and commercial vs Medicare processing.

Link: <https://www.udemy.com/course/certified-professional-biller-cpb-certification-course/>

4. Laboratory Medical Billing, Coding & Compliance

Covers payer rules, Medicare interactions, payment posting, claim submission, denial prevention, and revenue cycle management.

Important Industry Discovery

Dedicated Coordination of Benefits (COB) analyst courses appear to be limited. Most COB-related knowledge is embedded inside broader medical billing, revenue cycle management (RCM), or claims adjudication training.

This suggests that COB expertise is often learned operationally within insurance companies, healthcare providers, TPAs, and claims organizations.

High-Value Technical Areas to Study

The following topics appear to be central to building an automated COB or claims coordination platform:

Topic	Why It Matters
Coordination of Benefits (COB)	Determines payer order and financial responsibility
Medicare Secondary Payer (MSP)	Critical regulatory rules engine
ANSI X12 837/835	Electronic claims and remittance standards
270/271 Eligibility Transactions	Coverage verification workflows
Claims Adjudication	Core insurance payment decision process
Revenue Cycle Management (RCM)	Operational billing and reimbursement workflows
Denials Management	Handling payment conflicts and rejections
Clearinghouse Systems	Claim routing and transaction exchange
Explanation of Benefits (EOB)	Understanding payer decisions and adjustments
Payer Hierarchy Rules	Employee/spouse/dependent coordination logic

Key Standards & Infrastructure

- HIPAA X12 transaction standards
- 837 healthcare claim transactions
- 835 electronic remittance advice
- 270/271 eligibility verification transactions
- CAQH CORE interoperability standards
- Medicare COB/MSP manuals and payer coordination rules

Strategic Insight

The research suggests that a potential software opportunity may exist in:

- Claims adjudication automation
- AI-assisted payer coordination
- Revenue cycle workflow automation
- COB rules engines
- Denials prediction and resolution
- Eligibility and payer verification systems
- Analyst support tools for healthcare claims operations

The limited availability of dedicated COB analyst training may indicate a market gap in operational tooling, workflow automation, and educational resources.
